1 · Build the candidate ontology
1 · Warehouse
make_retail_warehouse.py
two schemas, no declared keys
2 · Profile and project
context init · duckdb profile
project bound to the warehouse
3 · Draft per schema
context draft --from-db
10 drafts; composite keys noted
4 · Infer foreign keys
context infer-fks
tie on accounts.company_id: ambiguous
2 · Decide and publish
5 · Terms and attributes
terms · attributes
8 confirmed queries, 2 measures kept
6 · Person decides the tie
companies, not company
recorded in draft/relationships.yml
a person acts
7 · Promote the drafts
context draft apply
any order; relationships wait for both ends
8 · Build and diff
context build · diff --schema
no drift in either schema
3 · Query, govern, and recover
9 · Query the semantic layer
janus --sql over MDL names
bridge and star joins return rows
10 · Certify and check provenance
certify · require_certified
uncertified models refused at planning
11 · Review agent corrections
propose · review approve|reject
one applied, one rejected, one refused
12 · Failed apply
draft apply (invalid draft)
validation fails; models/ unchanged
order of steps
a person's decision, not automated
